UDI PLATFORM FACTSHEET

Challenges of Life Sciences Companies

- Ensure competitiveness while maintaining global UDI compliance
- Monitor UDI regulations of multiple upcoming authorities with different requirements
- Establish a company-wide strategy for maintaining the validated state and allowing flexibility for future UDI requirements

UDI Platform Key Facts

UDI Platform is a cloud-based SaaS solution, as part of SAP's industry cloud solution portfolio, based on SAP Business Technology Platform (BTP).

UDI Platform by p36...

- supports consolidation and governance of UDI-related product master data.

- provides the end-to-end exchange capability of UDI data with different regulatory authorities on one platform.

- offers process automation to implement compliance requirements faster and more reliably.

- enables reusing existing data and mapping to controlled vocabularies for multiple authorities.

- is based on a solid foundation that can be flexibly extended according to individual needs and required regulations.

Benefits

- Managed Service by active market monitoring
- Global and scalable compliance concept for upcoming regulations
- Process automation for faster time to compliance
- Validation of data based on official requirements of regulatory authorities
- One platform for end-to-end UDI data governance & data exchange with regulatory authorities
- Native integration into IT landscapes (SAP and Non-SAP)

Why p36

- p36 already implemented and runs UDI Platform at multiple life sciences companies to manage their UDI compliance
- p36 looks at UDI compliance holistically
  - p36 develops an individual company-wide strategy
  - p36 provides guidance for the restructuring of internal processes
  - p36 delivers the basis for all UDI-related tasks
  - p36 enables quick and easy adaptations to future UDI requirements while ensuring the validated state

Technical Background

- Standalone solution as SaaS on SAP's Business Technology Platform (BTP)
- Part of SAP's Industry Cloud for Life Sciences
- Can run seamlessly integrated with SAP (S/4 HANA or ERP) and Non-SAP
